

Test

Micronutrients for corn on sandy soil

In 9 national tests in corn on sandy soil over 4 years, considerable additional yields were obtained for supplementing BioNutria Bor 150 and BioMangan 170 NS^P.

In the best test, Max, there are excellent surplus yields. At a price of 0,14 Euro/FU, up to 228 Euro/ha in earnings can be achieved for a treatment that costs approx. 14 Euro.

Spray BioMangan 170 NS^P and BioNutria Bor 150 together with a late weed spray and possibly again with an insecticide or fungicide spray.

Nine tests over 4 years	Additional yield
Treatment	FU/ha
2 x 2 ltr BioNutria Bor 150	720
2 x 2 ltr BioMangan 170 NS ^P	550
Max for BioNutria Bor 150	1,790
Max for BioMangan 170 NS ^P	980
